Professional Summary

Final-year B.Tech CSE student and Full Stack Developer (MERN, Next.js, TypeScript) specializing in Generative AI applications: LLM integration, AI agents, RAG, and prompt engineering with LangChain, LangGraph, and Mistral AI. Skilled in REST APIs, real-time systems (WebSockets), JWT authentication, and containerized deployments with Docker and Kubernetes, with AWS cloud fundamentals. Seeking Full Stack / Generative AI internship and placement roles.

Skills

Languages: Java, JavaScript (ES6+), TypeScript, Python,

Frontend: React.js, Next.js, Redux Toolkit, Context API, Tailwind CSS, Sass

Backend: Node.js, Express.js, REST APIs, JWT, Socket.IO (WebSockets), Redis, Microservices

Databases: MongoDB, MySQL

AI/GenAI: Generative AI, LLM Integration, LangChain, LangGraph, Mistral AI, AI Agents, RAG, Prompt Engineering

DevOps & Cloud: AWS (ECS, ECR, S3), Docker, Docker Compose, Kubernetes, Skaffold, CI/CD

Tools: Git, GitHub, Postman, Figma, Warp

Core Concepts: Data Structures and Algorithms, OOP, System Design Basics, Microservices Architecture

Projects

Banāo – AI-Powered Website Builder GitHub

React.js, Node.js, Express.js, Generative AI, LLM, Docker, Kubernetes, Skaffold, Microservices

- Developing a Generative AI website builder that converts natural-language prompts into React code with a real-time live preview.
- Architected a sandbox running generated projects in isolated Kubernetes pods for secure, iterative code updates and instant previews.
- Designed a microservices architecture (authentication, AI orchestration, notifications, sandbox) using Docker, Kubernetes, and Skaffold.

Moodify – AI Music Recommendation App Live | GitHub

React.js, Node.js, Express.js, MongoDB, Google MediaPipe, JWT, REST APIs

- Developed an AI-powered, emotion-based music recommendation platform using Google MediaPipe Face Landmarker for real-time facial expression detection.
- Built a mood-based recommendation engine with REST APIs and MongoDB; implemented JWT authentication to personalize recommendations and protect user data.

VeritasAI – AI Chat Application Live | GitHub

React.js, Redux Toolkit, Node.js, Express.js, MongoDB, Socket.IO, LangChain, Mistral AI, Tavily Search, LLM

- Developed a full-stack Generative AI chat app with Perplexity-style web search using LangChain, Mistral AI, and Tavily Search for context-aware, source-grounded responses.
- Implemented real-time messaging (Socket.IO), persistent chat history (MongoDB), Redux Toolkit state, and secure JWT auth with email verification and password reset.

Education

SRM University, Sonipat 2023 – 2027
B.Tech. in Computer Science and Engineering *CGPA: 9.25/10*
